ORIGIN AND BREEDING HISTORY OF THE VARIETY

Pedigree: Mitchell X Essex

'FFR 464' was a single plant selection from a cross of 'Mitchell' and 'Essex' in the F₄ generation at Battleground, IN in 1982. The earlier generations were developed using the pedigree selection method at Marshall, MO. In 1983 the seed from the F₄ plant was planted in an observation row at Brookston, IN.

'FFR 464' was first tested in replicated preliminary tests in 1984 at Battleground, IN; Seymour, IN; and Providence Forge, VA. It was tested in a 4 location advanced test and preliminary seed increase was begun in 1985. In 1986, it was tested in a five location elite test. Pre-breeder seed was grown in this year at Battleground, IN. 'FFR 464' was tested in 1987 in 7 locations and Breeder Seed was produced in this year.

'FFR 464' appears stable and uniform through eight generations of selfing and during our seed increase program. The seed lot which was produced in 1988 was contaminated with an identifiable off-type. In 1989 this off-type was rogued from the variety. The variety is essentially free of contaminants at the present time.

NOVELTY STATEMENT

'FFR 464' is most similar to 'Mitchell'.

'FFR 464' differs from 'Mitchell' in the following characteristics:

1. 'FFR 464' has white flowers while 'Mitchell' has purple flowers.
2. 'FFR 464' has a black hilum while 'Mitchell' has a brown hilum.
3. 'FFR 464' average lodging score is 2.3 compared to 2.9 for 'Mitchell'.
4. 'FFR 464' is three (3) cm shorter than 'Mitchell'

ADDITIONAL DESCRIPTION OF VARIETY

'FFR 464' is a mid-group IV soybean variety. It has white flowers, brown pubescence, tan colored pods, yellow seed, and a black hilum. 'FFR 464' has excellent standability and emergence. 'FFR 464' has incorporated the thin stem characteristic from its parent 'Essex' into an indeterminate growth habit. This has led to better lodging resistance and increased yield potential in 'FFR 464'.
